

💡 When a politician with no scientific training says there's "no evidence" of climate change, here's what they're actually denying:

- 📡 NASA's satellite data
- 📊 NOAA's century-long temperature records
- 📄 IPCC reports based on 14,000+ peer-reviewed studies
- 🌊 Documented sea level rise, glacier loss, and ocean heat
- 🚨 The growing frequency and cost of billion-dollar disasters
- 🛡️ The U.S. military's own climate threat assessments

They're not speaking from research
They're speaking from ideology

And let's be honest — it's not about the evidence
It's about what the evidence demands:

Fewer subsidies for fossil fuels
Stronger regulation
Real accountability
Long-term thinking

So the evidence isn't the problem
The consequences are

😬 When public officials pretend the science doesn't exist, it's not skepticism — it's strategic denial
And it's not harmless
It delays action
It misleads voters
It puts lives at risk

We don't need another press release
We need integrity
We need people who can handle truth — even when it's inconvenient
