

You're Not Ready — And That's the Problem

You think you're safe
You've got food
A job
A car
Maybe even kids and a 10-year plan

But here's the truth no one's saying loud enough
You're living on borrowed time

 We've already heated the Earth by 1.2°C
That's enough to trigger megafires
Flood entire cities
Collapse fisheries
And displace tens of millions

 We are now on track for 2.5–3°C by 2100
That level of heating doesn't just cause inconvenience
It causes civilizational instability

 Every second
The planet absorbs the energy of 5 Hiroshima bombs
That heat doesn't vanish
It builds
In our oceans
In the air
In the soil
In the systems that hold everything together

 Still drilling
Still building pipelines
Still pretending we can buy more time
But the carbon budget for 1.5°C is nearly gone

 Net zero by 2050 means nothing if we're expanding fossil infrastructure in 2025
Carbon capture is too small
Reforestation is too slow
There is no reset button

 What happens when
There's no rice harvest for 2 years
When heatwaves shut down power grids

When 2 billion people face water stress
When Miami and Mumbai flood twice a month
When supply chains break and don't restart

That's not a sci-fi script
That's the baseline projection under current policies

This is what we're handing to our kids

Not theory
Not later
Now

🚫 You are not ready
No government is ready
No infrastructure is ready
No emergency fund can stop what's already begun

But here's the final truth
No one is coming to save us
Not a president
Not a corporation
Not an app

Only hard decisions
Only repentance
Only radical humility and collective courage

🚫 The time for denial is over
The time for gradual is over
The time for pretending this isn't the defining test of our century is over

This isn't about being "green"
It's about being honest
It's about choosing to fight for a future that doesn't implode by design
